

26th August 2013

We had awarded ITV Computers a project for installing our critical Wireless Infrastructure systems for Data/Voice/Video in 2013. ITV Computers have not only worked with us to develop an effective solution for the same at our Karjat Campus, but they have demonstrated the ability to take our vision a step further and to anticipate our needs for the future. The entire project was carried out in a professional, efficient and in the time frame committed by them.

We have found the entire ITV team to be technically competent, enthusiastic and easy to work with.

We would not hesitate to recommend them to anyone, who have similar needs.
